Product Information

ExcelRT™ series

One-Step RT-PCR Kit

RP1100 50 RXN

Taq /RT Enzyme Mix

50 µl

2X One-step buffer

750 µl x 2

Storage

-20°C for 24 months

Features

- Generates dsDNA directly from RNA samples
- High sensitivity and yields
- High reproducibility, reduced pipetting errors
- High throughput
- Reduced RNase H ribonuclease activity

Description

The ExcelRT™ One-Step RT-PCR Kit is designed for the reverse transcription and PCR amplification of a specific target RNA from either total RNA or mRNA. The ExcelRT™ One-Step RT-PCR Kit provides the user an alternative to the lengthy two step processes (first strand generation and amplification) by using a single mixture, single tube, one step reaction. The ExcelRT™ One-Step RT-PCR Kit contains a 2X reaction premix consisting of an optimized buffer, dNTPs, Mg²⁺ and enzyme stabilizer, and a blend of recombinant reverse transcriptase and *Taq* DNA polymerase. The ExcelRT™ One-Step RT-PCR Kit allows the user to complete the RT-PCR process using a thermocycler in a single reaction setting. The ExcelRT™ One-Step RT-PCR Kit is capable of detecting even trace amounts of target RNA and ideal for target RNA amplification and analysis

General Procedure:

1) Prepare the reaction mix by combining the indicated volume of components of One-Step RT-PCR:

2)

2X One-Step Buffer	25 μ l
Upstream primer (10 μ M) *	1 μ l
Downstream primer (10 μ M) *	1 μ l
Taq /RT enzyme mix	1 μ l
RNA template**	X μ l (10 pg~1 μ g)
DEPC-Treated H ₂ O	Up to 50 μ l
<hr/>	
Final volume	50 μ l

3) Place reaction tubes directly into thermocycler and initiate first strand synthesis – amplification reaction.

* RP1100 is optimized for sequence specific primers.

** Adding RNA template last is recommended.

4) Thermal cycler program

<u>Reaction Steps</u>	<u>Temperature and Time</u>	
Preheat	until block temperature reaches 42~50°C	
<u>cDNA synthesis</u>		
Reverse transcription	42~55°C	30 min
Denature	94°C	2 min
<u>Amplification</u>		
Denature	94°C	20 sec
Annealing [#]	50~68°C	30 sec
Extension	72°C	30 sec/kb
} 30~35 Cycles		
<u>Final extension</u>		
Extension	72°C	1 min

[#]Optimal PCR condition varies according to primers' thermodynamic properties.

Note: RP1100 is not designed for multiplexing DNA with internal control, due to the competition of highly abundant housekeeping gene mRNA.
